

POSITION STATEMENT - CLIMATE CHANGE AND AIR EMISSIONS

In a world of limited resources and concerns around a changing climate, Sempra Energy and its business units focus on operating in ways that are sustainable and responsible while providing customers with the energy-related products, services and infrastructure they need.

Our respect for the environment goes beyond our immediate impact and includes our approach: what we focus on as an energy company and how we work with customers, suppliers and other stakeholders to deliver on our low-carbon business strategy. This strategy, comprised of energy efficiency, natural gas, renewable energy and innovation, is based on our forecast that in a carbon-constrained world, demand for lower-carbon sources of energy will continue to rise.

As such, we will:

- Continue to advocate for sensible energy policy to regulate and reduce greenhouse gas emissions and other air emissions;
- Consistently measure and report emissions data for our operations;
- Balance economic and environmental concerns with our customers' needs for energy that is safe and reliable, yet also clean and affordable;
- Continue to implement our low-carbon business model, employing energy efficiency, natural gas, renewable energy and innovation;
- Work to reduce our impacts and carbon footprint and that of our customers; and
- Continue to support the development of clean energy solutions.
